The Global Exploration Roadmap

Directed energy propulsion allows a path forward to true interstellar probes. The laser array technology is modular and extensible allowing a logical and well defined roadmap with immediate probe tests to start exploring the interstellar medium on the way to the nearest stars. This technology is NOT science fiction.

The In-Space Propulsion Systems technology area roadmap describes the portfolio of in-space propulsion technologies that could meet future space science and exploration needs. In- space propulsion represents technologies that can significantly improve a number of critical metrics.

Roadmap for In-Space Propulsion Technology

It is vital that we develop the deep space propulsion technologies that will take us there, first to explore with robotic probes, then to follow ourselves. This is necessary so that if anything catastrophic happened to Earth, our species would survive. And the possibilities for catastrophe are great.
