Microsoft Windows services, formerly known as NT services, enable you to create long-running executable applications that run in their own Windows sessions. These services can be automatically started when the computer boots, can be paused and restarted, and do not show any user interface.

Introduction to Windows Service Applications | Microsoft Docs
In 1993 Microsoft divided the operating system into two categories: Business and home user. Windows NT (New Technology) was a lot more reliable than Windows 3.x. Windows NT provided advanced network features. On the business front, Windows NT continued to develop with the release of version 3.51.

Introduction To Windows - Free Online Training Courses
Windows NT is a series of Microsoft's Windows operating systems written in the C and C++ programming languages. They were the first to use their new 'NT' (New Technology) core. That means it had a brand new core to do more things than the MS-DOS-based one that they used in older versions of Windows. Also, it was more secure and crashed less. Windows NT 3.1 was released as alpha versions in 1991-1992 and beta versions in 1993.
