Complete Head-to-Toe Physical Assessment Cheat Sheet ...

Like any other aspect of the exam, the neurological assessment has limits. Testing of one system is often predicated on the normal function of other organ systems. If, for example, a patient is visually impaired, they may not be able to perform finger to nose testing, a part of the assessment of cerebellar function (see below).

UC San Diego's Practical Guide to Clinical Medicine

The neurological examination is most valuable when it is guided by hypotheses that the physician formulates as the history is elicited. For example, if a right-handed patient reports an episode of difficulty in speaking, the examiner will search for signs of left hemisphere dysfunction: right hemiparesis and hemisensory disturbance.
